PROFILE SUMMARY

Full-stack MERN (MongoDB, Express.js, React.js, Node.js) developer with hands-on experience in building scalable and secure web applications. Proficient in developing RESTful APIs, implementing authentication/authorization, and integrating cloud services (AWS). Skilled in version control (Git/GitHub), API testing (Postman), and debugging using industry-standard tools.

PROFESSIONAL EXPERIENCE

Full Stack Web Developer, Startupway24

- Developed and optimized RESTful APIs using Node.js and Express.js.
- Implemented authentication and role-based authorization to enhance application security.
- Integrated database operations with MongoDB, ensuring efficient data handling.
- Collaborated with the frontend team to enable seamless integration of APIs and features.
- Improved system performance and scalability by optimizing queries and backend workflows.

SKILLS

Frontend : React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, TailwindCSS/Bootstrap

Backend : Node.js, Express.js, REST APIs , Java (SpringBoot)

Database : MongoDB, MySQL

Tools & Others : Git, GitHub, Postman, debugging.

PROJECTS

Aadhaar Update Portal

- Developed the **entire backend from scratch** using MVC architecture (Model, Service, Controller, Routes).
- Implemented **demographic data collection and validation** to ensure accuracy of user-submitted information.
- Built **admin-controlled features** to block/unblock retailers, improving system reliability and misuse prevention.
- Integrated **secure authentication and role-based authorization** to safeguard sensitive citizen data.
- Enabled **image handling functionality** by storing image URLs in the database and saving original images in **AWS S3 bucket** using **Multer**, ensuring scalability and optimized storage.

Tech Stack: Node.js, Express.js, MongoDB, AWS S3 Bucket, JWT, MVC Architecture

Comprig - Build your own machine

- Built the backend from scratch using **Node.js & Express** with **MVC architecture** for scalability and maintainability.
- Developed core APIs for **user signup/login, role-based authentication & authorization**, and account suspension/deletion.
- Integrated AWS functionality to **create, start, stop, and terminate cloud instances** from the platform.
- Designed **billing APIs** to track instance usage, calculate total hours, and generate user-specific billing data.

Tech Stack : Node.js, Express.js, MongoDB, AWS EC2, JWT, MVC Architecture, Apache Guacamole
